EXECUTIVE SUMMARY

What Is the C&D Marketing Hub?

A purpose-built marketing command center that replaces fragmented tools with one unified platform — powered by artificial intelligence.

The Problem

Managing marketing across Instagram, WhatsApp, and Email requires switching between multiple tools, manual content creation, and disconnected analytics. This leads to inconsistent messaging, missed opportunities, and wasted time.

The Solution

The C&D Marketing Hub consolidates all channels into a single dashboard with real-time analytics, AI-generated content, and automated workflows. Every lead, campaign, and content piece is managed from one place — with AI learning from your data to optimize performance automatically.

Platform at a Glance

COMPONENT	TECHNOLOGY	CAPABILITY
Database	Supabase (PostgreSQL)	15 tables, Row Level Security, real-time sync
Instagram	Meta Graph API	Account analytics, post tracking, engagement data
WhatsApp	WhatsApp Cloud API	Bulk messaging, templates, contact management
Email	Resend API	Templates, campaigns, contact lists, open tracking
AI Engine	Google Gemini	Auto content every 3 days, performance learning
Frontend	Next.js + React	7 dashboard pages, responsive, real-time updates
Media Storage	Google Drive API	Rendered videos & images referenced by link, zero duplication

Lead Tracking	Cross-channel Pipeline	Auto-scoring, source attribution, funnel management

CORE MODULES

Four Channels, One Platform

Each channel is fully integrated with real APIs — no mock data, no placeholders. Everything connects directly to live services.

📸

Instagram Management

Connect your Instagram Business account via the Meta Graph API. Track followers, engagement rate, reach, and impressions in real time. View your full media feed with per-post analytics including likes, comments, and saves.

💬

WhatsApp Business

Configure your WhatsApp Cloud API credentials to unlock bulk messaging. Create and manage message templates, import contacts via CSV, and send campaigns to thousands at once. Every conversation is tracked for lead scoring.

✉️

Email Campaigns

Build email templates with a rich editor, manage subscriber lists, and send campaigns via the Resend API. Track open rates, click-through rates, and bounces. Segment contacts by engagement level for targeted outreach.

🎯

Lead Tracking

Cross-channel lead pipeline with automatic source attribution. Every incoming message, email reply, or form submission creates a lead with AI-powered categorization and scoring through the funnel: New → Contacted → Qualified → Converted.

Cross-Channel Intelligence

The Hub doesn't just manage channels in isolation — it connects them. A WhatsApp lead who also engages on Instagram gets a unified profile. An email subscriber who opens your campaign and visits your page is automatically scored higher.

AI CONTENT ENGINE

Content That Learns & Improves

The AI engine doesn't just generate content — it studies your performance data, learns what works, and optimizes every piece it creates.

How the 3-Day Cycle Works

01 Analyze
Review engagement data

→

02 Generate
Gemini creates content

→

03 Review
Admin approves/edits

→

04 Publish
Auto-post to channels

What the AI Analyzes

- Post engagement rates (likes, comments, saves, shares)
- Best-performing content types (carousel, reel, image, story)
- Optimal posting times based on follower activity
- Hashtag performance and reach correlation
- Audience demographic shifts and growth trends
- Caption tone and length vs. engagement

What the AI Generates

- Instagram captions with optimized hashtags
- Content themes aligned with trending topics
- WhatsApp broadcast messages
- Email subject lines and body copy
- Content calendars for the next 3-day window
- A/B test variants for high-value posts

Approval-First Workflow

No content goes live without your review. The AI generates and queues content as "Pending" — you can approve, edit, or reject each piece from the Content AI dashboard. Approved content is scheduled for optimal posting times automatically.

WORKING MODEL

How The Platform Works

From login to lead conversion — a complete end-to-end workflow designed for real-world marketing operations.

STEP	ACTION	WHERE
1. Sign In	Authenticate with email & password via NextAuth	Login Page
2. Connect Channels	Add Instagram, WhatsApp, and Email API credentials	Each Channel Page
3. Import Contacts	Upload CSV files for WhatsApp & Email subscriber lists	WhatsApp / Email
4. Create Templates	Build message templates for WhatsApp & Email campaigns	WhatsApp / Email
5. Launch Campaigns	Select template, choose audience, send to all channels	WhatsApp / Email
6. AI Generates Content	Every 3 days, Gemini analyzes data and creates new posts	Content AI
7. Review & Approve	Approve or reject AI-generated content before it publishes	Content AI
8. Track Leads	Monitor incoming leads across all channels with auto-scoring	Lead Tracking
9. Analyze Performance	View engagement, reach, open rates across all channels	Overview + Instagram

Zero Mock Data Architecture

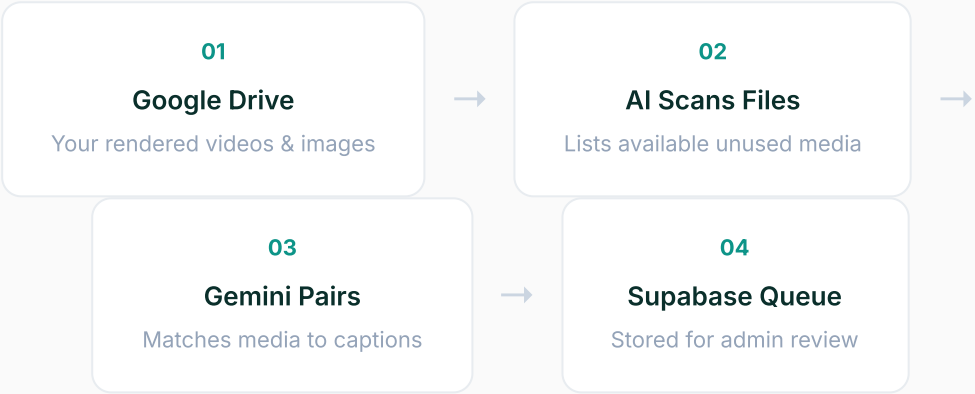
Every data point in the dashboard comes from real API calls. When you connect your Instagram account, the platform syncs your actual follower count, real engagement rates, and genuine post metrics. The AI Content Engine trains on your real performance data — not synthetic examples.

MEDIA WORKFLOW

Google Drive + AI Content Pairing

Your rendered videos and images live on Google Drive. The AI doesn't create media — it creates the text strategy and pairs it with your existing files.

How Media Flows Through the System



What Gets Stored in Supabase

- AI-generated caption text
- Optimized hashtags (15-20 per post)
- Google Drive media URL (link to your file)
- Content type (Post, Reel, Carousel, Story)
- Scheduled posting date & time
- AI performance reasoning
- Approval status (Pending → Approved → Published)

What Stays on Google Drive

- All rendered video files (.mp4, .mov)
- All design images (.jpg, .png, .webp)
- Original project files
- Campaign folders organized by date
- Media is referenced by link, never copied
- No storage duplication — zero extra space

Smart Media Matching

The AI reads file names and types from your Drive folder, then matches them to the content it generates. A file named "walkthrough-render-v2.mp4" would be paired with a Reel caption. A "kitchen-design-final.jpg" would get a Post caption about interior design. Already-used files are automatically skipped to prevent repeats.

3-Day Content Buffer

Every cycle generates 6 content pieces (2 per day × 3 days). Each piece references a specific file from your Drive. You review all 6 at once, approve the ones you like, and the system schedules them

at optimal posting times. Your Drive folder becomes your content library — and the AI is your strategist.

ADVANTAGES

Why C&D Marketing Hub?

Tangible benefits designed specifically for Concepts & Design's marketing operations.

Unified Command Center

No more switching between Hootsuite, Mailchimp, WhatsApp Business app, and Instagram insights. One login, one dashboard, all channels.

AI-Powered Content Creation

Gemini automatically generates captions, emails, and messages — learning from your actual engagement data to improve over time. Save 10+ hours per week on content creation.

Cross-Channel Lead Tracking

Every interaction across WhatsApp, Instagram, and Email is captured and scored automatically. No manual lead entry, no missed opportunities.

Bulk Campaign Sending

Send WhatsApp broadcasts to thousands of contacts simultaneously. Send targeted email campaigns with segmented lists. All from the same interface.

Real-Time Analytics

Live follower count, engagement rates, email open rates, and campaign performance — updated in real time via direct API connections.

Enterprise-Grade Security

Supabase Row Level Security, end-to-end encrypted credentials, NextAuth session management. Your data is locked down at every layer.

Custom-Built for C&D

Unlike generic SaaS tools, this platform is built exclusively for Concepts & Design — matching your brand, your workflows, and your growth goals.

Cost Efficiency

Replaces $200-500/month in separate tool subscriptions (social schedulers, email platforms, CRM tools) with a single self-hosted solution.

Ready to Launch?

Three steps to activate your Marketing Hub

1

Add API Keys

Meta, Resend, Gemini

2

Connect Channels

Instagram, WhatsApp, Email

3

Go Live

Start marketing
